This course delivers the basic knowledge and information how to work with E350 meter. Most of the meter features and functionalities are explained, and how to commission, communicate and perform maintenance tasks for the meter as well as the usage of the documentation.

Participants know the basic functionalities and the features of E350 devices and .MAP110. Participants understand the faceplate, display menus and installation diagrams. Participants know how to operate the meter with the buttons and perform readout and service with the MAP software.

Target group	Employees of the utilities and other companies working in the metering sector, who want to learn the features and operation of the E350 meter and the service software.
Requirements	Participants understand the topics of the Metering Basics course.
Content	• Field of application • Type designation • Design and Functionalities • Display and readout • Error handling • Communication • Security system • .MAP110 functionality • Data readout
Duration	1 day
Training documentation provided	E350 Course Documentation
Additional information	Participants often prefer to bring their own laptop with installed optical head, and this is also our recommendation. If needed, computers and optical heads are available in the training center. During the course we will assist in installing the meter service software .MAP110. For the installation of .MAP110, license key and administrator rights are required.
Attestation	Attendance Certificate handed out at end of training.
Further training	E350+E35C Parameterization All other device or solution courses
